Review of: "Publishing Test-Ready Hypotheses When Experiments Are Out of Reach"

Ricardo Amils¹

1. Molecular Biology, Universidad Autónoma de Madrid, Spain

I think the concept of the ms is a very interesting one, but what is not clear to me is the need to use AI to publish a test-ready hypothesis. If it is considered important, it should be explained or clarified along the text. Also, I found the ms repetitive; it can be reduced. Probably, a real good example might help to clarify the operational part of the concept.
