Mesomelic dysplasia, Savarirayan type

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Mesomelic dysplasia, Savarirayan type. ORPHA:85170*

Mesomelic dysplasia, Savarirayan type is characterised by severely hypoplastic and triangular-shaped tibiae, and absence of the fibulae. So far, two sporadic cases have been described. Moderate mesomelia of the upper limbs, proximal widening of the ulnas, pelvic anomalies and marked bilateral glenoid hypoplasia were also reported.
