Review of: "Physiological Mechanisms Underlying the Primary Respiratory Mechanism (PRM) and Cranial Rhythmic Impulse (CRI) in Osteopathy: A Narrative Review of the Literature"

Thomas Hoegy¹

1. Independent researcher

This is a very complete review revisiting the cranial concept and explains just a little more about the physiology reliability between diagnosis and treatment ([Reliability of Diagnosis and Clinical Efficacy of Cranial Osteopathy: A Systematic Review – PubMed](#)), but reproducibility between practitioners has to be improved, with tests in large populations ([Intraexaminer and interexaminer reliability for palpation of the cranial rhythmic impulse at the head and sacrum – ScienceDirect](#)). In my opinion, the electric depolarization and Farazin theory have to be dug into to explain the physiological effect of treatment ([ostéopathie crânienne](#)).
