# Review of: "The Global Polio Eradication Initiative has done well to introduce 3 doses of the Inactivated Poliovirus Vaccine in Afghanistan"

Ursino Pacheco García<sup>1</sup>

1. Instituto Nacional de Cardiología, Mexico City, Mexico

I believe the article is publishable, although for a better understanding of the information provided, it would be helpful to include an illustrative table showing the target child population for the vaccine in Afghanistan, the necessary coverage, and the actual coverage predicted during the years of vaccine administration. Also, please provide information on the number of current cases in Afghanistan and the regions with the most recent cases.
