Although in cases of MDR TB this Peripheral Neuropathy(PN) is a common problem. In most of the cases PNs are drug induced.

I have few query for authors:

1. How to differentiate whether this is Linezolid or cycloserine induced PN or due to toxicity of Pyridoxine?
2. Which PN respond better to treatment ATT induced or Pyridoxine deficient or toxicity induced?
3. Dose of Linezolid was only 300mg/day. How much common is PN on such a low dose of Linezolid ?
