

# Review of: "An Investigation of The Phytochemical Richness of Fresh Musa Paradisiaca L. (Plantain) Stem Juice and Its Anticonvulsant Potential on Pentylenetetrazole (Ptz)-Challenged Rats"

S.P. Shewale

Potential competing interests: No potential competing interests to declare.

The abstract is well-structured and effectively communicates the study's objective, methodology, and key findings. The objective of the study is clear: to evaluate the therapeutic potential of Musa paradisiaca L. (MP) stem juice in treating epileptic convulsions. The significance of the research is highlighted by linking it to a widely recognized seizure model in rats.

The inclusion of six groups of albino rats adds robustness to the study design. However, it would be helpful to briefly mention the rationale behind choosing different concentrations of MP stem juice for Groups IV, V, and VI.

The methodology, including the administration of PTZ and the treatment duration, is well-described. It would be beneficial to provide additional details on the phytochemical screening methods.

The assessment of safety through a lethality test is a valuable addition. It might be beneficial to include specific observations or parameters assessed for safety.

The identification of bioactive compounds in MP stem juice is a strong point. However, consider elaborating on the potential therapeutic effects of the identified compounds in the context of epilepsy.

The description of seizure manifestations and the effects of MP stem juice on latency periods are clearly presented. However, it would be helpful to include statistical measures for significance (e.g., p-values) to strengthen the findings. The conclusion effectively summarizes the study's findings and emphasizes the potential of MP stem juice in preventing convulsions. Consider adding a brief discussion on the broader implications of the results and any limitations of the study.

Consider adding a sentence or two suggesting potential avenues for future research or applications of the study findings. Overall, the abstract is well-written and provides a solid foundation for the research. Addressing the above points could enhance its clarity and impact.
