Potential competing interests: No potential competing interests to declare.

First of all, I would like to share that the author has full command of his topic, to the point, well-balanced, and well-written. He knows about his idea and hypothesis; the references are also up to date, and there are no self-citations.

This is a topic that people care about, and it's a recent health issue which he discussed in very clear words. The discussion is very clear, critical, and comprehensive.

It only needs to add more references/literature in each section, as the number of literature cited in each section is nine or ten. If we talk about the role of pet animals in the zoonotic transmission of SARS-CoV-2, it also needs more citations.

The treatment and pharmaceutical prophylaxis of COVID-19 section needs more elaboration and more literature.

So, I recommend publishing this article as such after these minor revisions.
