

# Review of: "How Competent are Health Professionals in Delivering Nutrition Education? A Cross-Sectional Study in Ebonyi State, Nigeria"

Rafi Alnjadat<sup>1</sup>

<sup>1</sup> Al-Balqa Applied University

Potential competing interests: No potential competing interests to declare.

1. I suggest that the title to be revised and include the predictor factor.
2. Introduction: the aspect of "healthcare providers" under investigation was not introduced properly. moreover, nothing mentioned about Nigeria? nothing mentioned about the factors that affect the competency as it was investigated later.
3. The author need to clarify how they got proportionate respondent from each discipline? the inclusion and exclusion criteria was not mentioned? is the teaching curriculum for all healthcare providers standardized?
4. The demographic data included in the questionnaire, should be stated in methods section. the reliability and validity of the questionnaire not stated.
5. Need major revision to focus on discussing the concluded themes and how it is compared to other studies' findings.
6. conclusion: Need to be revised to give clear, specific conclusions about the results. Then, to address how the results can be utilized at the study setting and the healthcare system in Nigeria.
