

# Review of: "Sentiment Analysis of Opinions about Online Education in the Kurdistan Region of Iraq during COVID-19"

Manisha Satish Divate

**Potential competing interests:** No potential competing interests to declare.

Thorough literature work is done by the authors. Preprocessing task performed on the twitter data is explained in detail. Some terms are considered as known. for example, 80/20 or 90/10 model. Need explanation on it. Also Result part is not discussed in detail. What is authors observation on data and the results obtained after applying machine learning techniques. What is authors view on the feature increments? Whether the results can be further improved? and How?. Why did authors not consider the deep learning models?
