**Potential competing interests:** The author(s) declared that no potential competing interests exist.

Authors of the paper titled **Biofuels and nanocatalysts: A Data Mining study** did a very good work with a deep discussion of the results. However, I have some comments which could improve the paper quality.

I think that authors must provide more than one paper to give the different uses of nanocatalysts not only one; ref 27. Introduction must be improved by giving the state of the art of biofuels and nanocatalysts. This could be done by the review of the most important papers published in the five recent years.

Authors have to improve x-axis in figure 1. remove the coma in the years.

Using the same keywords as the authors, and performing a quick investigation in sciencedirect, I found that there were another paper published on 2008 related to biofuel and nanocatalyst.

In figure 3, the authors have to provide a larger range of colors. The main countries contributors have a very close colors. Please use both cold and hot colors.
