The work is well written scientifically. There are minor corrections...What do the acronyms IRs and CFRs mean? These are found in the Introduction.

This paper shows the linkage between humans, animals, and the environment as per the proliferation of mosquito-borne infections. This relationship could be harnessed by the different stakeholders in Indonesia to control mosquitoes that can transmit diseases. They have to do a self-evaluation and see where they can improve in their collaboration with each other. This work can be used to control mosquito vectors in all tropical countries battling with mosquito-borne infections. It was a pleasant read.
