Mixed cryoglobulinemia type III

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Mixed cryoglobulinemia type III. ORPHA:93555*

Type III mixed cryoglobulinemia, a relatively rare clinico-serological subtype of mixed cryoglobulinemia (MC, see this term), is an immune complex disorder characterized by purpura, weakness and arthralgia and defined immunochemically by cryoglobulins containing both polyclonal IgGs and polyclonal IgMs.
