Review of: "Results in Cone Metric Spaces and Related Fixed Point Theorems for Contractive Type Mappings With Application"

Dušan Bajović[1]

1 University of Banja Luka

The paper deals with topics of rational type contractions in complete cone metric spaces. Two major issues arise:

1. There are too many similar parts with paper L. G. Huang, X. Zhang, "Cone metric spaces and fixed-point theorems of contractive mappings," Journal of Mathematical Analysis and Applications, vol. 332, iss.2, 2007, https://doi.org/10.1016/j.jmaa.2005.03.087

2. In definitions and theorems through paper, cone metric d takes values from real Banach space E. Obviously, cone metric spaces generalize metric spaces, but authors in many definitions and theorems after that use division and multiplication on E that narrow down the scope of E considerably, so they practically got results in metric spaces.

Kind regards,

Dušan Bajović
