Potential competing interests: No potential competing interests to declare.

This article provides an analysis of the need for greater integration between naturalistic philosophy and the work of occupational science. It explores the intersection of these two fields, and considers ways in which their individual approaches could help to inform one another. It reveals that while they share similar goals and methods, they differ in terms of their approaches and objectives, illustrating the potential to build a bridge between the disciplines. This article offers an interesting, ingenious, and thought-provoking discussion of naturalistic philosophy, occupational science, and their combined potential for progress. It is certainly worth reading for anyone looking to gain insight into this important and powerful intersection.

This article provides an insightful analysis into the need for naturalistic philosophy in order to interpret the developments and advancements of occupational science. It demonstrates the importance of further research in this field in order to gain a more comprehensive understanding of the implications of OT.

I think it is important to discuss how naturalistic philosophy can inform and direct occupational science. Furthermore, it is important to explore how naturalistic philosophy can help inform research and practice in occupational science, as well as how it can help address ethical and social issues that arise through research and development. Additionally, it is important to consider how naturalistic philosophy can help guide policy and intervention design.
