# Carumonam Sodium

National Cancer Institute

## Source

National Cancer Institute. *Carumonam Sodium*. NCI Thesaurus. Code C79905.

The sodium salt form of carumonam, an N-sulfo monocyclic beta-lactam antibiotic derived from sulfazecin. Carumonam has high resistance to beta-lactamases and activity against aerobic gram-negative bacteria. It reaches high urinary concentrations and may be used in the treatment of urinary tract infections.
