**Potential competing interests:** No potential competing interests to declare.

The authors developed a home monitoring system useful when no one is in the home. Remote monitoring is done using an IoT platform. The article is well structured. They present an introduction and concrete justification, as well as the materials and methods used. The development of the system is clear and concrete. Sufficient evidence and results are presented. The work meets a need of society efficiently and optimally. The conclusions presented are good. However, I recommend including future work and possible modifications if the system is applied to other environments or places, such as hospitals and offices. I also recommend using recent references.
