Ptosis-vocal cord paralysis syndrome

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Ptosis-vocal cord paralysis syndrome. ORPHA:2997

Ptosis-vocal cord paralysis syndrome is a rare, hereditary disorder with ptosis characterized by the combination of congenital bilateral recurrent laryngeal nerve paralysis and congenital bilateral ptosis. There have been no further descriptions in the literature since 1983.
