

Review of: "Chronic disease treatment default prediction with random sampling optimization."

K.V V

Potential competing interests: No potential competing interests to declare.

1. Class activation maps can be added for better visualization
2. Reference citations are not proper
3. Contribution of the author is limited and novelty of the work is limited
4. Results comparison need to be explained improved with latest methods
5. Robustness of the model need be tested under various conditions
6. Validate the performance using some other standard database
7. Topic is interested but need to improve their results and discussion sections
