

# Review of: "Fast Addition for Multiple Inputs with Applications for a Simple and Linear Fast Adder/Multiplier And Data Structures"

Surya Prakash

Potential competing interests: No potential competing interests to declare.

Organization of the content is good. It is unclear what is new in the paper. Majority of the content seems to be from already established knowledge put in a different form or considered as implications. It is unclear if there are any improvements made to the existing methods, if so, can be clearly mentioned in the abstract and at the end of Motivation section.
