Potential competing interests: No potential competing interests to declare.

The second version of paper entitled "*Hospital's Thermo-neutral Zone for Patient Safety and Climate Change Sustainability*" was reviewed. My recommendations are as follows:

- The resolution of some figures (such as Fig.4) should be improved.
- The last paragraph of introduction needs major revisions.
- Conclusion section should be improved.

In the light of these and other reviewers' comments, unfortunately, **cannot** recommend that this paper is acceptable for publication in this journal.
