Potential competing interests: No potential competing interests to declare.

The review on in vitro antibacterial activity of some Ganoderma species need through revision of its content as per topic.

The content of the text shows that the review is on Antimicrobial activity of Ganoderma in context with Diabetic foot ulcer, However the manuscript is well drafted but you need the editing of the text as per the title of the review.

You may add some local / geography specific variety of Ganoderma for Diabetic foot ulcer . Instead of a single table you may make separate table for Antibacterial activity and activity on ARS (Antibiotic resistant strains) .

Its activity on fungi and virus as well as its other useful / harmful (white rot in tree) properties can either be described separately or may be omitted.
