Potential competing interests: No potential competing interests to declare.

Need to update the article; some comments/suggestions are:

1. The method should be detailed.
2. Revise the tables and figures (unclear ones); they must be clear and easy to read.
3. A limitation section is required; assumptions need to be mentioned somewhere (if considered). Future outcomes and options must be presented in the conclusion section effectively. The discussion must establish this study as an effective one.
4. An effective and precise comparison with the detailed literature available on the topic is required, showcasing the effectiveness of this work...
5. Additional methods (if applied) can support the existing work in a positive manner.
6. Recheck for grammatical, spelling, and meaning errors.

Good luck!!!
