Dear Authors,

Authors have presented the methodology and body of the article very well. Some reviews to improve the better quality of the manuscript.

1. The novelty of the paper needs to be sufficiently clarified
2. The manuscript would significantly improve with providing a visual representation of the proposed system
3. Certain abbreviations should be defined upon their initial use in the text for better clarity(MWe)
4. Typographical errors should be eradicated.(Like annual in fig 1)
5. The authors fall short in providing a comparative analysis of their results with the existing literature.
6. The simulation software may be used in the paper for better clarity.
