## Comments and Suggestions for Authors:

The paper's topic is very important for the literature. However, the research is presented not clearly and consistently, and a lot of issues need to be addressed carefully. My decision rejects the paper. Please see my comments and suggestions below.

"The manuscript lacks conciseness in its abstract. Moreover, the manuscript deviates significantly from standard research norms. Crucial elements such as data and methodology explanations are missing. There is also a conspicuous absence of discussion and theoretical underpinnings. These deficiencies need to be addressed for the paper to reach a publishable standard."

Good luck for your work!
