**Potential competing interests:** No potential competing interests to declare.

1. For the sake of non-Algebra enthusiasts and those who have just started working with concepts in this field, may I suggest that the author provide a short recall of concepts like Orthogonal and simple groups, rather than assuming that all readers are already familiar with these terms or referring readers to another material (which may take some time to locate).
2. In the proof of the first lemmas, may I suggest mentioning which prior truths these lemmas directly follow from, rather than just saying that the proofs are straightforward.
3. Whenever possible, it would help a lot if readers could see specific examples (such as may be done with finite groups).
