# CD2AP wt Allele

National Cancer Institute

## Source

National Cancer Institute. *CD2AP wt Allele*. NCI Thesaurus. Code C97248.

Human CD2AP wild-type allele is located in the vicinity of 6p12 and is approximately 150 kb in length. This allele, which encodes CD2-associated protein, is involved in the regulation of both cell division and the association of membrane proteins with the cytoskeleton. Mutation of the gene is associated with glomerular disease.
