Potential competing interests: No potential competing interests to declare.

The report should encompass a comprehensive range of surveys and sightings to provide robust data. Including observations across various life cycle stages, from juvenile to mature phases, would be highly advantageous as it allows for a more detailed assessment of species sustainability and population health. Observing these life cycles will help ensure that the species is not only surviving but also thriving in its environment, which is essential for understanding its long-term viability and informing any necessary conservation measures.

It will be helpful if the photos of the specimens are accompanied by some sort of scale.
