The theme of this paper is interesting and the content is quite substantial, however, there are issues from developing the papers motivation and contribution, to literature review, to findings. Therefore, the significant revisions will be required before further considering this paper to be published.

Introduction. I guess there is a writing error with title 1 and 2. I think it needs to re-write by taking attention on main research issue, motivation, theory and hypothesis.

literature review. I suggest categorizing literature review according to different content categories. Specifically, it should identify key features and findings of the literature, identify limitations and conclude by distinguishing what you do to fill in at least of this gaps.

Method. This paper applied DCC-GARCH to study the dynamic relationship between Bitcoin and major energy commodities. In fact, there are many models that study the dynamic relationship of variables before, such as TGARCH EGARCH IGARCH TVP-VAR, etc. I suggest giving the reasons for the model selection, preferably by comparing the results of several models to provide relatively robust conclusions.
