**Potential competing interests:** No potential competing interests to declare.

The review topic is very interesting. However there are some criticisms:

- not clear why the authors report micro-based strategy in the section "Potential nanocarriers approaches". My advice is to focus only on the nanoscale strategies and add a section on the surface nanofunctionalisation e.g. using layer-by-layer assembly
- missing sections on the applications and the current limitations on their use in clinics. This translational consideration can provide much more impact on the review
