IMPLEMENTING TASK SUBSTITUTION FOR DOCTORS AND NURSES AS A KEY ELEMENT OF HEALTHCARE REFORM

I appreciate the opportunity to review this paper on implementing Task Substitution for Doctors and Nurses as a Key Element of Healthcare Reform.

General comments

The paper addresses an important aspect of healthcare, which is Implementing Task Substitution for Doctors and Nurses as a Key Element of Healthcare Reform.

Several studies have explored different aspects of healthcare. This paper is an addition with context relevance for healthcare reform; hence, I consider it appropriate for publication. However, additional revision and proofreading are recommended to improve the content, formatting, and language of the paper.

Abstract

The abstract is well-structured and descriptive. The findings are specific in describing the Implementation of Task Substitution for Doctors and Nurses as a Key Element of Healthcare Reform. However, recommendations were not given to adequately align with the findings.

Introduction

The background was well-written, and the need for the study was justified.

Objectives

The objectives of the article were explicitly stated.

Analysis and Discussion

This article provides a comprehensive analysis of how advanced nursing roles can alleviate pressures on healthcare systems and suggests actionable steps for policymakers. The trend of discussion clarified the implementation of Advanced Nursing Practice (ANP) as a key element in the reform of the healthcare system, which is struggling with a

shortage of doctors and nurses.

Implications for Healthcare

The implications were well-articulated and properly aligned with the discussion.

Conclusions are drawn from the findings.
