

Review of: "Current Novel Concept of Carcinogenesis to Combat Oral Cancer"

Ioannis Alexandros Charitos

Potential competing interests: No potential competing interests to declare.

The article refers to carcinogenesis but this topic is not covered enough. There are many other causes of risk (such as precursor conditions, genetic and environmental factors) that cause oral cancer that are not reported. Furthermore, how these risk factors act in the cell to cause biomolecular pathways, must be reported for every cause (especially for infectious causes such as **EBV**, HPV, the controversy of *Candida albicans* and other). Useful articles can be:

- Inchingolo F., *et al.* Oral Cancer: A Historical Review. *Int J Environ Res Public Health*. 2020 May 2; 17 (9): 3168. doi:10.3390/ijerph17093168.
- Di Cosola, *et al.* *Candida albicans* and Oral Carcinogenesis. A Brief Review.
- J. Fungi (Basel). (2021) Jun 12; 7 (6): 476. doi:10.3390/jof7060476.
- Santacroce L., *et al.* Focus on HPV Infection and the Molecular Mechanisms of Oral Carcinogenesis. *Viruses*. 2021 Mar 26; 13 (4): 559. doi:10.3390/v13040559.

We need a major revision of these topics to be published.
