Hi,

Thanks for giving me this opportunity to review this interesting article. I have some notes to enhance the manuscript:

1. Some sentences in the manuscript miss the reference which should be added for scientific reliability.
2. How did the authors collect their data? There is no description of what they contain.
3. There is no comparison of model results with other machine learning models (logistic regression, LSTM model, etc.).
4. The results are not discussed fully and thoroughly. The authors need to talk more about their findings.
5. The authors didn't explain why they chose only the papers that are mentioned in Table 1. What are the criteria for choosing these papers?
6. There are some grammatical and typographical errors in the manuscript; please check it carefully.
7. What are the limitations of the study?
