Gevokizumab

National Cancer Institute

Source

National Cancer Institute. *Gevokizumab*. NCI Thesaurus. Code C97945.

An IgG2 humanized monoclonal antibody against the pro-inflammatory cytokine interleukin 1 beta (IL-1b) with anti-inflammatory activity. Gevokizumab binds to IL-1b, thereby preventing IL-1b-mediated inflammatory responses. This antibody has a long half life and allows for once a month dosing intervals.
