Mouse gp100 Plasmid DNA Vaccine

National Cancer Institute

Source

National Cancer Institute. *Mouse gp100 Plasmid DNA Vaccine*. NCI Thesaurus. Code C48410.

A vaccine consisting of a plasmid DNA encoding the murine melanoma-associated antigen gp100. Upon administration, expressed gp100 antigen may stimulate a cytotoxic T cell HLA-A2.1-restricted immune response against tumor cells that express the gp100 antigen, resulting in tumor cell lysis. (NCI05)
