**Potential competing interests:** No potential competing interests to declare.

The review is well-written and provides details of the methods performed during the molecular docking process.

1. However, more detailed comparisons between the standard drugs and the designed compound are required, especially with the hinge region part.
2. In the title, "various compounds" may be replaced with the "moiety name" for the clarity of the compounds.
3. The chemical structure of the designed molecules may be made clearer and cleaner.

Overall, the article is well written and provides understanding of the topic.
