

# Review of: "The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis"

Sepideh Shahriary

Potential competing interests: No potential competing interests to declare.

The title addresses an applicable interesting topic yet there are some items should be noted to turn the paper to a scientific article.

1. the authors should present the reports of the empirical research that is claimed regarding different aspects of the efficacy of Cu NPs in treating viral skin infections, providing the paper with some tables and statistical analysis. Although, the plain explanations shows that the authors have taken into account most of the required aspects and intervening variables in such metanalysis.
2. considering that there are numerous techniques producing metal nanoparticles including Cu with different physicochemical characteristics, it seems that the comparison among the production techniques and NPs characteristics should be referred to i
3. bearing the title of a metanalysis, the paper needs more references and surely updated ones to hold that title.
4. considering the above motioned pitfalls, this paper doesn't yet seems appropriate to get published.
