Potential competing interests: No potential competing interests to declare.

Syntax error: "The main outcomes of this paper are to provide 1) identify feasible..." in the abstract, and many are noted within the text. The idea of the whole text is applaudable; however, from the review point, the context only highlights the surface of a given field. Such an approach may suit presentation rather than publication. The approach is guided; however, it lacks a more fundamental link between field-to-field of application. IoT is highly adaptable and thus becomes broad. Focus on a selected field and review that field would serve the text with much depth.
