# Inhibitor of Nuclear Factor Kappa-B Kinase-Interacting Protein

National Cancer Institute

## Source

National Cancer Institute. *Inhibitor of Nuclear Factor Kappa-B Kinase-Interacting Protein*.  
NCI Thesaurus. Code C96382.

Inhibitor of nuclear factor kappa-B kinase-interacting protein (350 aa, ~39 kDa) is encoded by the human IKBIP gene. This protein plays a role in the induction of apoptosis.
