Alcaligenes faecalis

National Cancer Institute

Source

National Cancer Institute. *Alcaligenes faecalis*. NCI Thesaurus. Code C86140.

A species of obligately aerobic, Gram negative, rod shaped bacteria assigned to the phylum Proteobacteria. This bacteria is motile, oxidase positive, catalase positive, does not reduce nitrates and degrades urea. A. faecalis is found in soil, water, and fecal matter and is an opportunistic pathogen in humans.
