Potential competing interests: No potential competing interests to declare.

The topic holds a lot of significance; however, the attempt lags on certain fronts as follows:

1. Abstract and body text do not explain non-revenue water at all. It must be explained in depth.
2. The methodology is too detailed but lags in technical depth. Write the implications - both general and specific to the study area.
3. Detail out the figures a bit more; these look a bit immature as of now.
4. The literature review is lagging in depth. Make sure you have a rigorous review in place and outline the literature gaps.
5. Conclusions and end sections are fine.
