Potential competing interests: No potential competing interests to declare.

The manuscript selected a good topic and investigated a common problem. On the other hand, some reorganizing is needed as given below. Then it will be more proper.

1. Some abbreviations such as SIL, INH, PZA could be written in long form in the beginning.
2. UA/OA mixture should be written in the material-method part.
3. In the introduction, choosing SIL for positive control should be given detail.

Best of luck the researchers...
