Potential competing interests: No potential competing interests to declare.

There are some concerns:

1. The originality of Figures 1, 2, and 3. Are these figures designed by authors?
2. No abbreviations were written in the manuscript. What are HIF and CD?
3. The titling is confusing. The methods should be definite and referenced.
4. The figure captions of figures 5, 6, and 7 are the same. These figures could be combined in a panel system. The same for figures 8 -11.
