**Potential competing interests:** No potential competing interests to declare.

There is a novelty and great title in the manuscript but it is so generalized. In the abstract section, the authors can write a detailed more and it was written so general . . . First, clarify and write about , the study's method . Next, write about the more issues, in discussion and expanded more to be more innovative and encouraging for readers , which might include tables or figures that are difficult to read, parts that need more explanation, I think the English language of the manuscript is suitable for publication but needs minor revision. . This will help both the authors and the readers , but anyway I do like the hot topic of MRNA vaccines.
