

# Review of: "Health System Reform: Decentralization of Health System in Pakistan"

Harun Ur Rashid

Potential competing interests: No potential competing interests to declare.

The author has described the challenges in health care in Pakistan.

The author described the important issues of the healthcare system. Many more issues in developing countries need to be included, particularly population control, child and mother health, communicable and non-communicable diseases. Progress of SDGs may be added to know the present position in the country, so that we know in what position the country stands, where to improve, and what steps to take for future progress. Issues of decentralization come once we are able to know the present position and then advise for future direction. For example, what is the position of diarrhoea in the country, environmental position, empowerment of females, etc., and mortality in mothers and children.

I don't know whether there is a limitation on the word count for this review article and, therefore, the author focuses only on the main issues.

Regards and best wishes
