

Review of: "Factors influencing women's decision choosing a public or private health facility for tuberculosis (TB) services: An analysis of Nepal demographic and health survey data 2016"

Prem Shankar

Potential competing interests: No potential competing interests to declare.

1. Language is confusing at some places, for example you have written 'women were interviewed', while you have used secondary data.
2. Word 'Decision' has been used in the title but is not clearly justified in the manuscript.
3. You have included only women in the study (men not included), no justification is available in the manuscript.
