Here is a brief analysis of the paper "Motivational Variables as Predictors of Academic Achievement Among University Students."

Though not novel, the problem and paper are fascinating. The studied text is accurate, and the author makes a strong introduction. Though not novel, the issue is intriguing. It shows results that might be examined by comparison with other related studies.

A few minor modifications are needed to the procedure: the measuring instrument is not sufficiently detailed in the instruments chapter (please write more about the measured subscales). Everything else is appropriate and of high quality.

The debate is excellent, and the results are accurate. The article can be approved with a few minor edits. It doesn't require my approval once again. The writer should add additional references.
