Potential competing interests: No potential competing interests to declare.

As emphasized in the article, education is not only limited to providing students with knowledge, but also It should also be known that it aims to raise individuals who can express themselves, be creative, and learn cooperatively. In this context, I really liked the collaborative learning through storytelling (CSCS) application in the study. I believe that such studies will open a horizon for those working in the fields of social work and education. However, the readability of this article would increase if the study covers the subheadings of the academic article (purpose, method, findings or design, results, etc.), pays attention to the APA referencing system, and the connection of the transitions between paragraphs is better. Also, I could not reach this reference in your reference list: "Lambropoulos N. & Plota, K. (2022). The Development In Dialogues! Theory and Practice in the Sciences of Education and Training, 8(227-244)". I congratulate the author for her research.
