

# Review of: "Inhibiting Efflux Pumps and Resistance Mechanisms: A Mini Review"

Nabi Jomehzadeh

Potential competing interests: No potential competing interests to declare.

— The current study is interesting; however, the authors should address the following comments to improve the quality of the manuscript:

1. Please write the scientific names of bacterial pathogens and genes in the correct form all over the manuscript and in the References section (should be italicized).
2. The abstract must illustrate the used methods and the most prevalent results (give more hints about methods and results).
3. Recheck all numbers and presents in the text, to ensure their accuracy.
4. Minor spacing problems exist between the words in some parts of the text.
5. The English of the manuscript should be reviewed and syntax and errors should be corrected before publication.
6. Use the following valuable studies performed on pathogen isolates in the introduction or discussion section and add related references, including:
