Potential competing interests: No potential competing interests to declare.

Originality

This paper used an interesting perspective of a combination of Kotter's eight stages of leading change, the fusion cell approach, and the LEADS framework, all of which share certain commonalities. In doing so it offers a fresh perspective. However, the paper needs to incorporate a stronger synthesis of the concepts to make it stand out.

Relationship to literature

The paper's relationship to the literature was good, but would benefit from incorporating more literature and using this in a broader synthesis of the concepts, including the shortcomings inherent in the extant literature.

Methodology

The methodology was appropriate, however the paper would benefit from a more detailed description of the methodology, in particular, how the criteria for identifying relevant papers was decided on, and why.

-

Results

Not applicable.

-

Implications for research, practice and/or society

The paper discusses implications for practitioners, but does not address implications for research. This is important as it provides researchers with information relevant to their research directions and can assist in informing future research.

Also, there is no limitations or recommendations section. This information informs researchers regarding their future research directions.

Quality of communication

The paper clearly articulated.

Recommendation: Major revision
