Potential competing interests: No potential competing interests to declare.

The paper deals with the reproductive disorders in dairy cows. Generally, the analysis was rather simple, and was made in 140 cows only. However, it brings some information in simple conditions, when the cows are milked by hand.

My comments:

In MM section, describe the breeds in the farms.

Similarly, describe better the cows, age, number of lactations.

How long was the study period, one pregnancy or more, give the date of start and end of observation.

Give information on the milk performance of the cows observed.

Who made the diagnosis, veterinarians? Comment it in MM section.

The incidence of disorders seems to be rather high; do you have any explanation?

Discussion section is too wordy, shorten it at a half at least.

Abstract, explain the 1st use of RR.
